SoGEA

DSUK

What Is SoGEA Broadband?

SoGEA stands for Single Order Generic Ethernet Access.

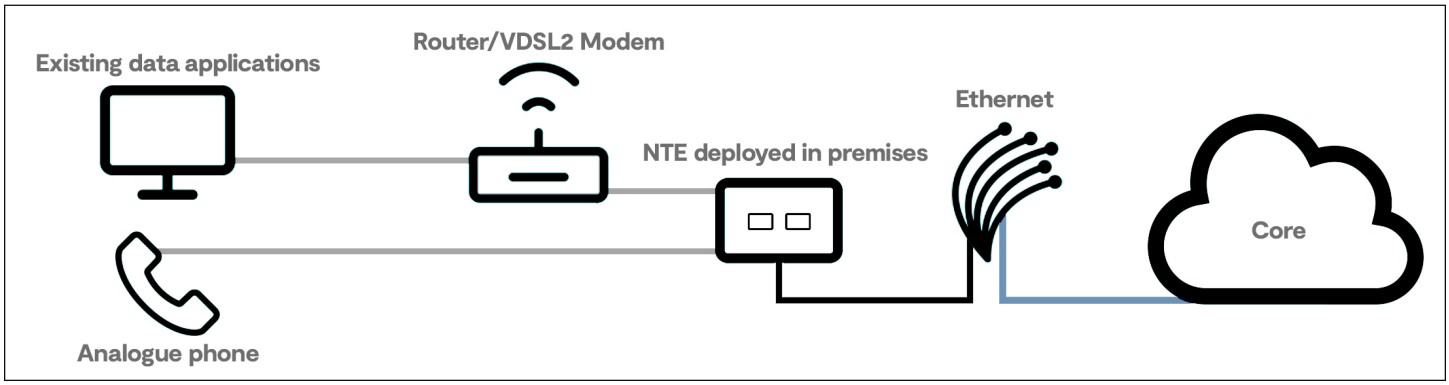
Up until now, to deliver broadband to a home or office, you needed to have a traditional phone line installed and then ADSL Broadband or Fibre Broadband installed on top of it.

In the world of technology today most people only have this fixed line because it is necessary for their broadband to work.
With the advancement and cost effectiveness of mobile handsets and VoIP, and the nationwide rollout of full fibre networks, there is less and less requirement for traditional phone services. SoGEA enables businesses to buy a broadband connection without the need for a phone line.

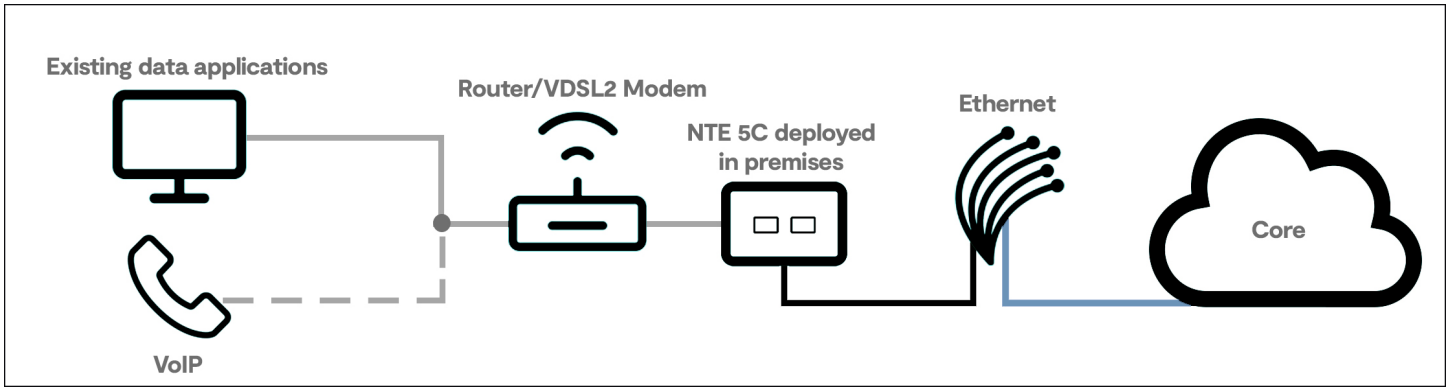
This will allow providers to slightly reduce the cost whilst offering fast and reliable broadband to consumers.

Speak to our sales team about the available cloud based voice options, such as Hosted or SIP Trunk telephony.

Today - Separate Products



Tomorrow - Single Access



What Are The Benefits Of SoGEA?

Great prices and packages available

Future-proof connectivity

Full support with quicker fix times
